Settings and Properties For MBO Iceberg

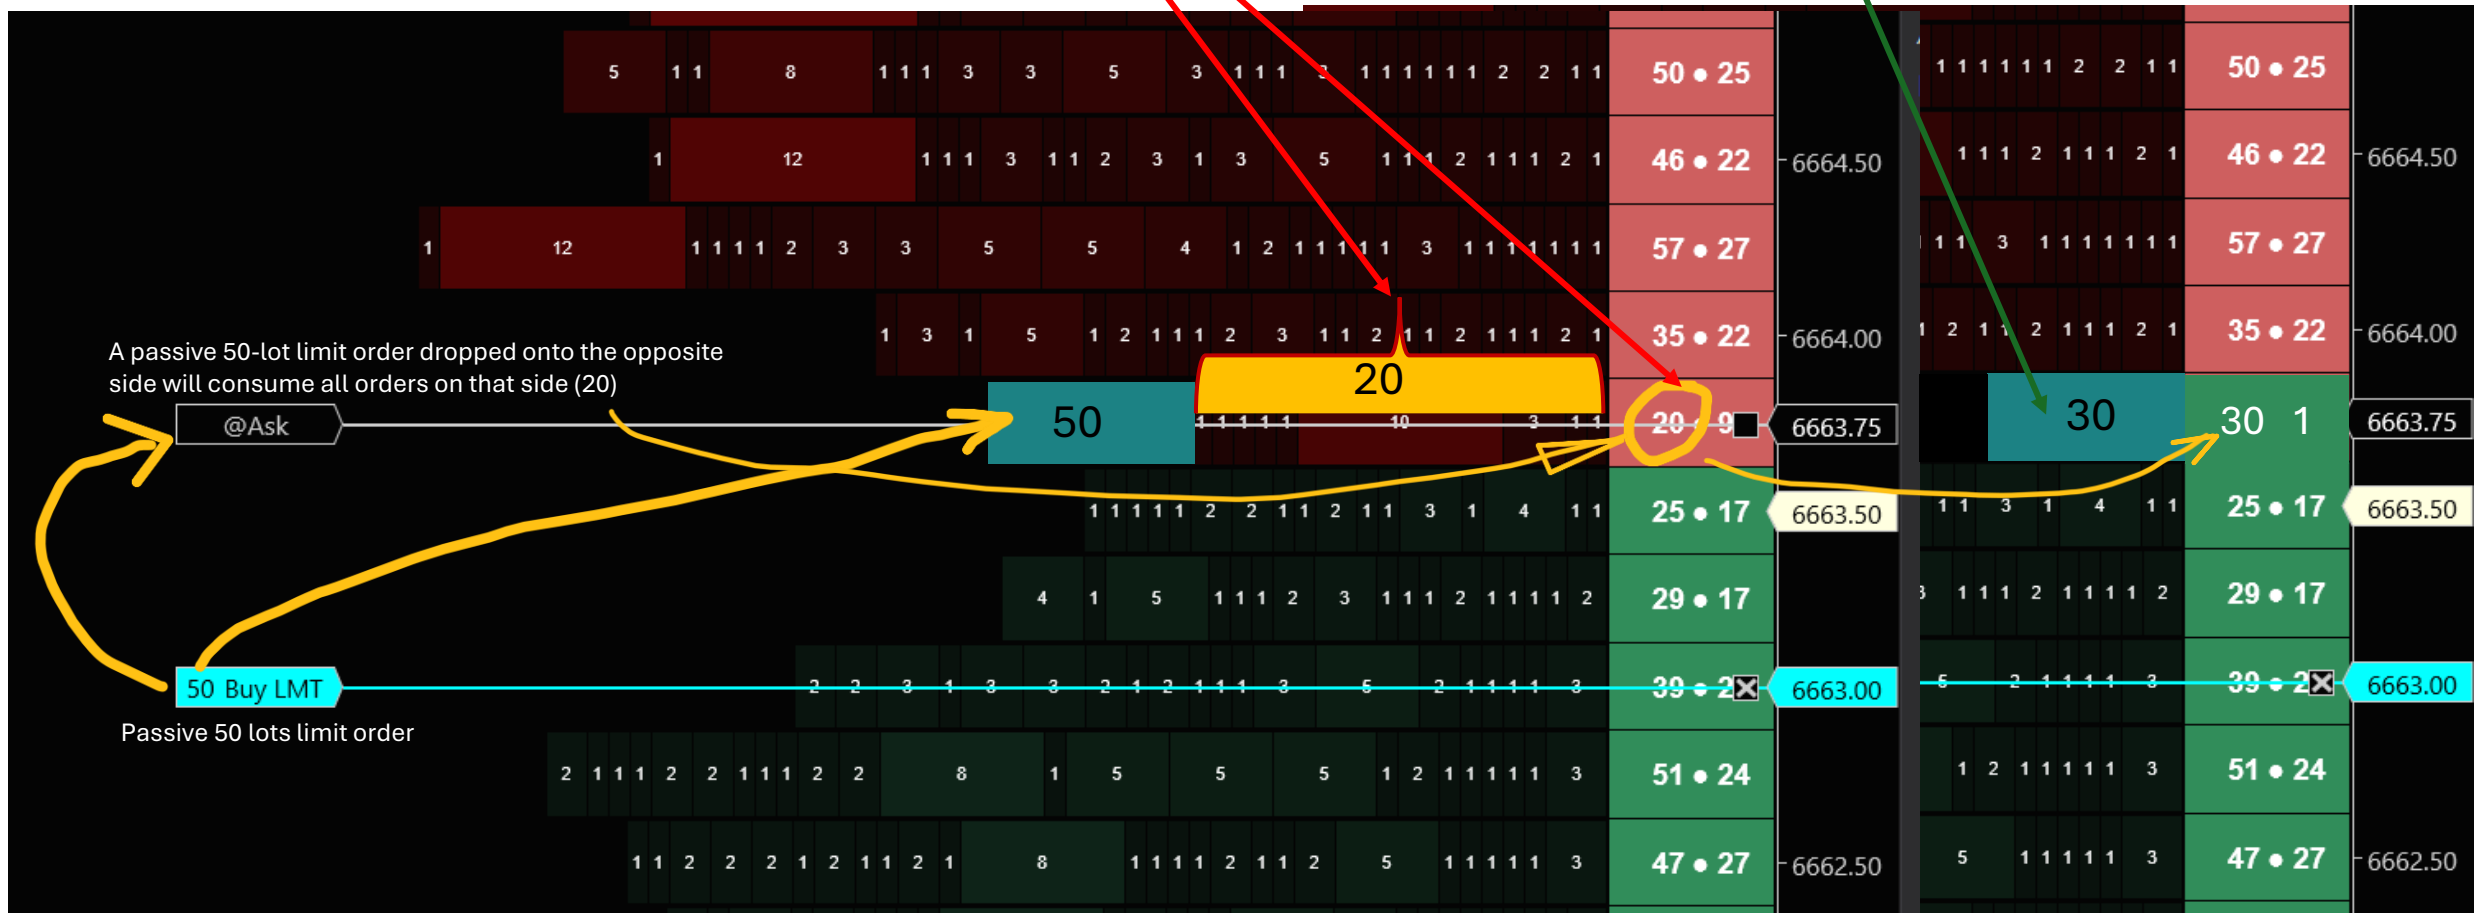

Passive order entered aggressively

BestOrderFlow.com

Fifty (50) lots dropped to the opposite side and consumed all 20, leaving 30 remaining lots to continue as a passive buyer.

The total order was 50. 20 lots were used as an Aggressive part.

When this 30-lot remaining order is filled with more than 30 lots, at that point, we recognize that order as an iceberg, capable of consuming more than a regular passive order.

Section 01 and 02. – for all icebergs

Section 03. – for “normal” icebergs

To show icebergs with a Minimum volume accumulated from the aggressive side is 5 or more. **To show all - enter 1.**

How many times has the passive order been filled in and restarted to accumulate.
Recommend to use 0 - means **no restrictions and shows all** icebergs with no refills and with any refill times.

Recommended is 0. Zero means show all icebergs. Any volume over zero will filter out icebergs without the aggressive side of it. The larger the number, the larger the aggressive part of the iceberg should be if you want it to display.

The shape of the iceberg is without an aggressive part. Square for “normal icebergs” by default.

The minimum shape size

The maximum shape size

The volume that starts in the smallest shape.
Minimum volume here is 1 lot

The volume that fits into the largest shape size.

To show volume numbers on the shape or to hide volume numbers on the shape

Font size for text/ numbers shown
on the shape

Width of the outline around the shape
